FELTNOVA

Fitness & Recreation Belt Guide

Feltnova supplies belts for fitness equipment, ski lifts and specialized recreation systems. Explore treadmill running belts, drive belts for strength machines, and conveyors for ski areas.

Treadmills

Feltnova treadmill belts provide a consistent running surface for equipment used at walking, jogging and running speeds. Choose the surface texture and belt construction to suit the deck and expected duty cycle.

Ski conveyors

Feltnova Prolink modular belts can be used on uphill ski conveyors. Depending on the installation, they can support inclines of up to 25° at speeds from 0.1 to 0.6 m/s.

Ski lift loading

Feltnova Transilon fabric belts and Prolink modular belts can be specified with grip surfaces for ski lift loading. Permanent boarding markings can help passengers identify where to stand.

Strength equipment

Feltnova Powerbelts transfer motion in weight-training machines. Select the belt according to load, pulley diameter and the machine’s operating cycle.

Specialized applications

For specialized training and recreation equipment, Feltnova can help match belt construction and surface texture to the machine’s layout, load and working environment.
