Feltnova

Insulation Production

Application planning guide

Keep the material supported

Map the product path from forming to cutting and stacking. Check transfer gaps, belt speed and support beneath lightweight or flexible products.

Match the belt to the process

Record material type, dimensions, weight, process temperatures, contact chemicals and any airflow or vacuum requirements.

Plan practical maintenance

Review tracking, tensioning, cleaning access and replacement procedures with the equipment team.

Discuss your application with Feltnova

Provide line drawings and operating conditions so that belt options can be evaluated for the specific machine.

Belt specifications and suitability are subject to application review.
