Feltnova

Packaging Belt Selection

Match the belt to the packaging task

Map the product journey

Record product dimensions, packaging material, line speed, spacing and transfer points. Distinguish unpackaged food contact from sealed-pack handling.

Select for the process

Consider surface grip, release, pulley diameter, belt tracking and compatibility with inspection equipment. Validate the choice on the actual line.

Plan cleaning and maintenance

Specify the cleaning method, chemicals, temperature and access requirements before choosing a belt. Request product-specific documentation from Feltnova.
