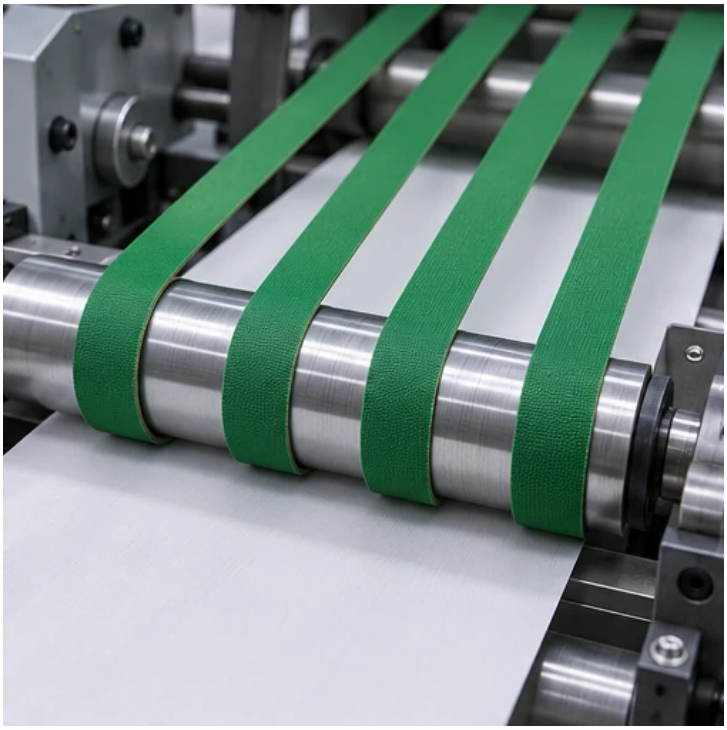
Feltnova

Machine Tapes

Selection guide for paper converting and letter sorting



What to check on the line

1. Start with the paper or mail format, surface finish and allowable marking. Check the smallest and largest items the machine must carry.

2. Map the belt positions from infeed to discharge. Note belt speed, pulley diameter, transfer gaps and any steep or vertical sections.

3. Compare grip at pickup and release at transfer. Test with both delicate stock and abrasive materials under normal operating conditions.
