Feltnova

Conveyor and Processing Belts for Tobacco

Green leaf processing

Match the belt surface and profile to leaf intake, sorting, and transfer between harvesting, curing, and bale handling operations.

Primary processing

Review product temperature, moisture, and stickiness at slicing, conditioning, cutting, drying, and machine feeding.

Secondary processing

Consider stable tracking and reliable transfer at equipment infeed, packaging, and downstream carton handling.

Selection checklist

Record product condition, throughput, belt dimensions, pulley diameters, transfer geometry, and cleaning methods. Confirm the belt specification for each duty before installation.
