Treadmill Belt Selection Guide

1. Confirm equipment fit

Record the treadmill make and model, belt width and length, roller dimensions, and deck type. Check the equipment maker's replacement specifications before choosing a belt.

2. Match the surface to the application

Consider the typical walking or running speeds and the footwear used. Select a surface texture appropriate for the intended use and test it on the actual machine.

3. Check deck and maintenance requirements

Confirm the required belt backing and lubrication practice for the deck. Follow the equipment maker's instructions for installation, tension and tracking.

4. Validate the belt on the machine

After installation, check centering and clearance at low speed. Verify tracking across the intended speed range according to the equipment maker's procedure.
